SUMMARY

Results-driven professional with a broad technical background in Information Technology with 10 plus years of experience in application development life cycle and technical support. Ability to successfully contribute as an independent consultant or employee in a high-tech environment. Excellent problem-solving skills and a strong orientation in customer service/satisfaction. Able to work under pressure in a fast-paced, time-sensitive environment. Experienced in analyzing and streamlining product delivery systems to increase productivity, quality and efficiency. I'm very passionate about writing code and love to try new things.

TECHNICAL EXPERTISE		
Microsoft Access/ SQL Server/Oracle	Visual Basic for Applications	Windows 98/NT/XP
HTML	XML/XSLT	Microsoft Front Page
Visual InterDev/ ASP ASP.Net (academic)	Cold Fusion	Macromedia Fireworks
508 Compliancy Codes	Java Script/ VB Script	PHP/Apache
CUSTOMER FOCUS SKILLS		
On Time Delivery	Team Building & Interpersonal Skills	Excellent Communication Skills
Issue Analysis and Resolution Skills	Application Development Life Cycle	Excellent Presentation Skills
Focus on Customer Satisfaction	Project Management Methodologies	Decipher complex issues into simple solutions
SECURITY CLEARANCE		
Secret / Interim Top Secret held by CACI		

PROFESSIONAL EXPERIENCE

CACI (2006 to Present) www.caci.com

Arlington, VA

2006 to Present:

Senior Application and Web Developer assigned to United States Department of Defense – Arlington, VA
Maintain and develop a tool for IT Procurement. The application consolidates data from multiple sources and scrubs it to present it in a consistent format. The tool is used to manage the entire procurement process from quote, to purchase, to delivery into and out of a warehouse to installation at the customer. It tracks computers, people, licenses, software, stock levels, vendors, as well as many other pieces of data. The application is an invaluable tool for IMCEN RAD to do their jobs. It has received many acclaims.

STG Inc (1999 to present) www.stginc.com

Fairfax, VA

1999 to Present:

Senior Application and Web Developer / Technical Manager assigned to United States Department of State – Washington, DC
Created three Department of State Departmental Web sites. Two are written in ASP using Visual InterDev with Access or SQL Server back-ends. The third was a Beta-site using ColdFusion. All three incorporated VBScript and JavaScript. Along with the complete web sites, I design and develop web applications that were either incorporated within the existing sites or stand-alone. This development effort also included multiple user surveys that were published on the Intranet. In recognition of my work, the client provided me with multiple Government Awards for my contribution and efforts. In addition, I provided leadership by overseeing the work of mid level developers, and assisted them in technical issues.
Under a separate contract, I created a new design for the Office of Foreign Missions internal web site and am in the process of redesigning their Internet site through the use of their development tool Waterfall.

CompTrex LLC, Independent Consultant
Marshall, VA
1999 to Present:

Service Offerings:

Web Application Development services.

Clients:

Meridian Knowledge Solutions LLC – Chantilly, VA (2006 to 2007) www.meridianksi.com

Contract lead developer for multiple web sites. Meridian is a software company that produces and customizes knowledge management software. My responsibilities included customizing the base product to meet the client's requirements. This ranged from simple interface modifications to large functionality changes and enhancements. Skills used were Visual Source Safe, VB Script, SQL Server, ASP, JavaScript, Oracle, as well as organization and prioritizing skills. Customers that I was involved with include Land O' Lakes, Panera Bread, Zaxby's Chicken and the Senate Sergeant at Arms.

MacFadden – Silver Springs, MD (2004 to 2006) www.macf.com

Working with legacy Excel systems I created a data call application for EUR in the Department of State. The client had Excel spreadsheet that was being sent to Posts to collect data. The system was very cumbersome and labor intensive. I created an application to organize the data once it comes in. The application uses MS Access as the database and Cold Fusion as the front end. The customer needed a way to generate reports in html, so I create them in ColdFusion and saved them as html.

Geneva Software Inc – Fairfax, Virginia (1999 to 2005) www.genevasi.com

Senior Application and Web Developer / Technical Manager assigned to United States Department of State – Washington, DC

Using Application Development Life Cycle methods and working with the Client, I developed and maintained an internal collaboration work flow application in Microsoft Access. This application provided the client with the ability to effectively track the flow and volume of work, identify dependencies and interrelationships between functional sections. The implementation and development of the application save the customer resources, eliminated redundancies, provided critical business reports and is demonstrated as an effective workflow tool to other customers at the Department of State. The system tracks the status of 1,700 forms and 17 Volume of Policies encompassing 18,000 pages of data. The application is currently being migrated from Microsoft Access to a SQL Server backend with an ASP front end.

Futron Inc, Bethesda, Maryland (1999 to Present) www.futron.com

Application Developer

Developed and maintain an internal satellite tracking database in MS Access. The application is used by analysts to project satellite and launch activity. It also allows the users to export certain data to other applications that are sent to customer, specifically the FAA.

EDUCATION:

Pennsylvania State University – The Behrend College – Erie, Pennsylvania www.psu.edu
Associate Degree in Mechanical Engineering Technology, 1991
